

Introduction of SAE International

1. What is SAE International?

Society of Automotive Engineers (SAE), which was founded in 1905, is the largest academic organization of automotive engineering in the world. They are mainly working at the industries in material and manufacturing of auto, heavy truck, commercial vehicle, airplane and engine. The standards SAE constituted have been authoritatively considered, widely applied in the fields of automotive industry or else and partially accepted to be the national ones. So far, SAE international boasts more than 84,000 members who come from 97 nations. They update or correct more than 600 standards files regarding to automotive, aeroplane and aerospace engineering annually.

2. The business involvement of SAE International

- I Hold SAE annual congress, topic seminars, lectures and conferences of automotive technologies; promoting academic exchanges home and abroad.
- I Hold exhibitions of automotive science and technology, developing international exchanges.
- I Edit and publish scientific books, periodicals and CD products.
- I Regulate different kinds of standards for automotive engineering.
- I Assist the enterprises of automotive industry for their standardization certification. Established SAE fund to encourage diligent staff for their contribution and research results.
- I Make the cooperating research plan and associate both sides to overcome technical problems.
- I These years, there exists a close cooperating relationship between China Automotive Technology And Research Center and SAE International. Both sides are striding forward for the further achievement.
